

Open Data and National Statistics: Working together

UN World Data Forum
Cape Town, South Africa
16 January 2017

OPEN DATA WATCH

National Statistical Systems have
an interest in Open Data

Principle 1. Official statistics provide an indispensable element in the information system of a democratic society... [they] are to be compiled made available on an impartial basis by official statistical agencies to honor citizens' entitlement to public information.

The Open Data Community has
an interest in National Statistical
Systems

The International Open Data Charter suggests two BIG reasons

For improved governance and citizen engagement

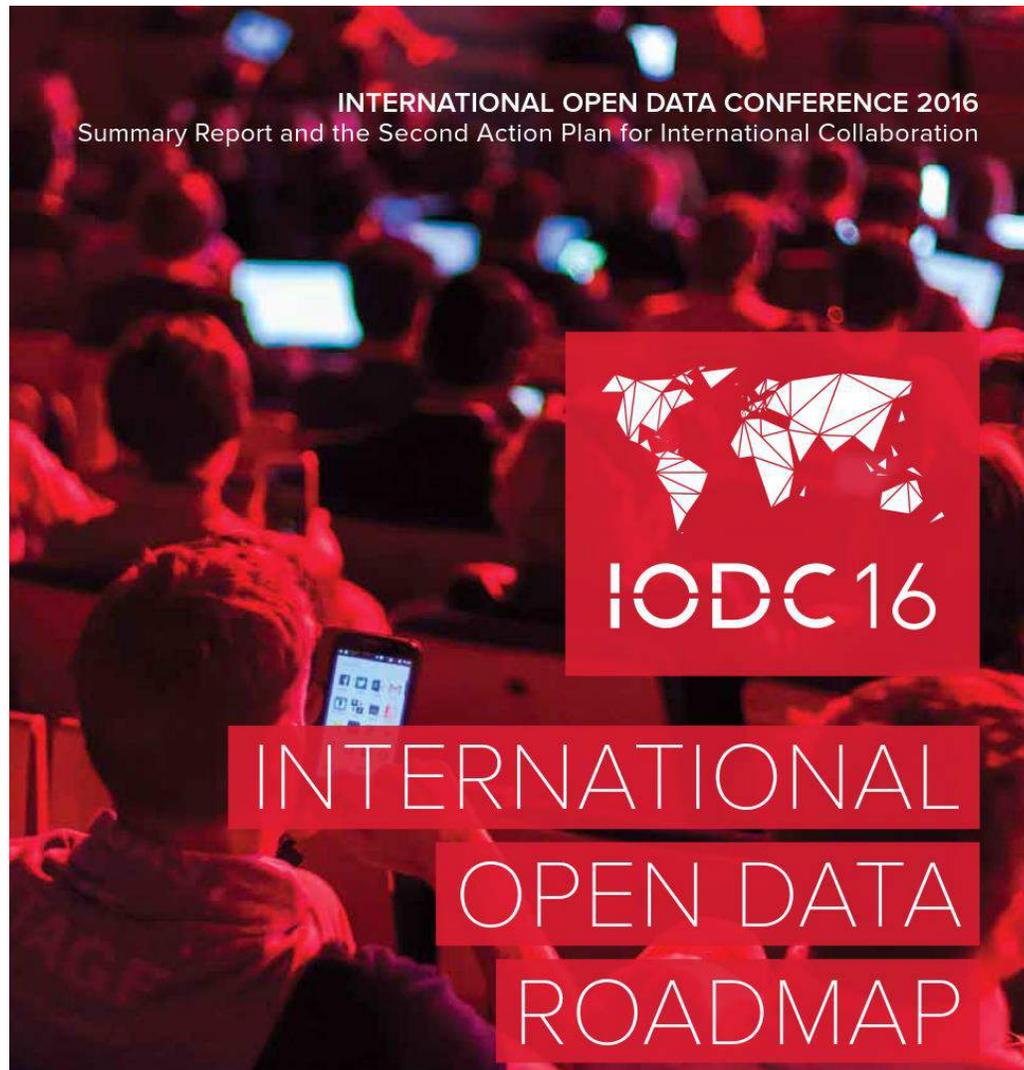

For inclusive development and innovation

But national statistics can get lost in the larger world of open data

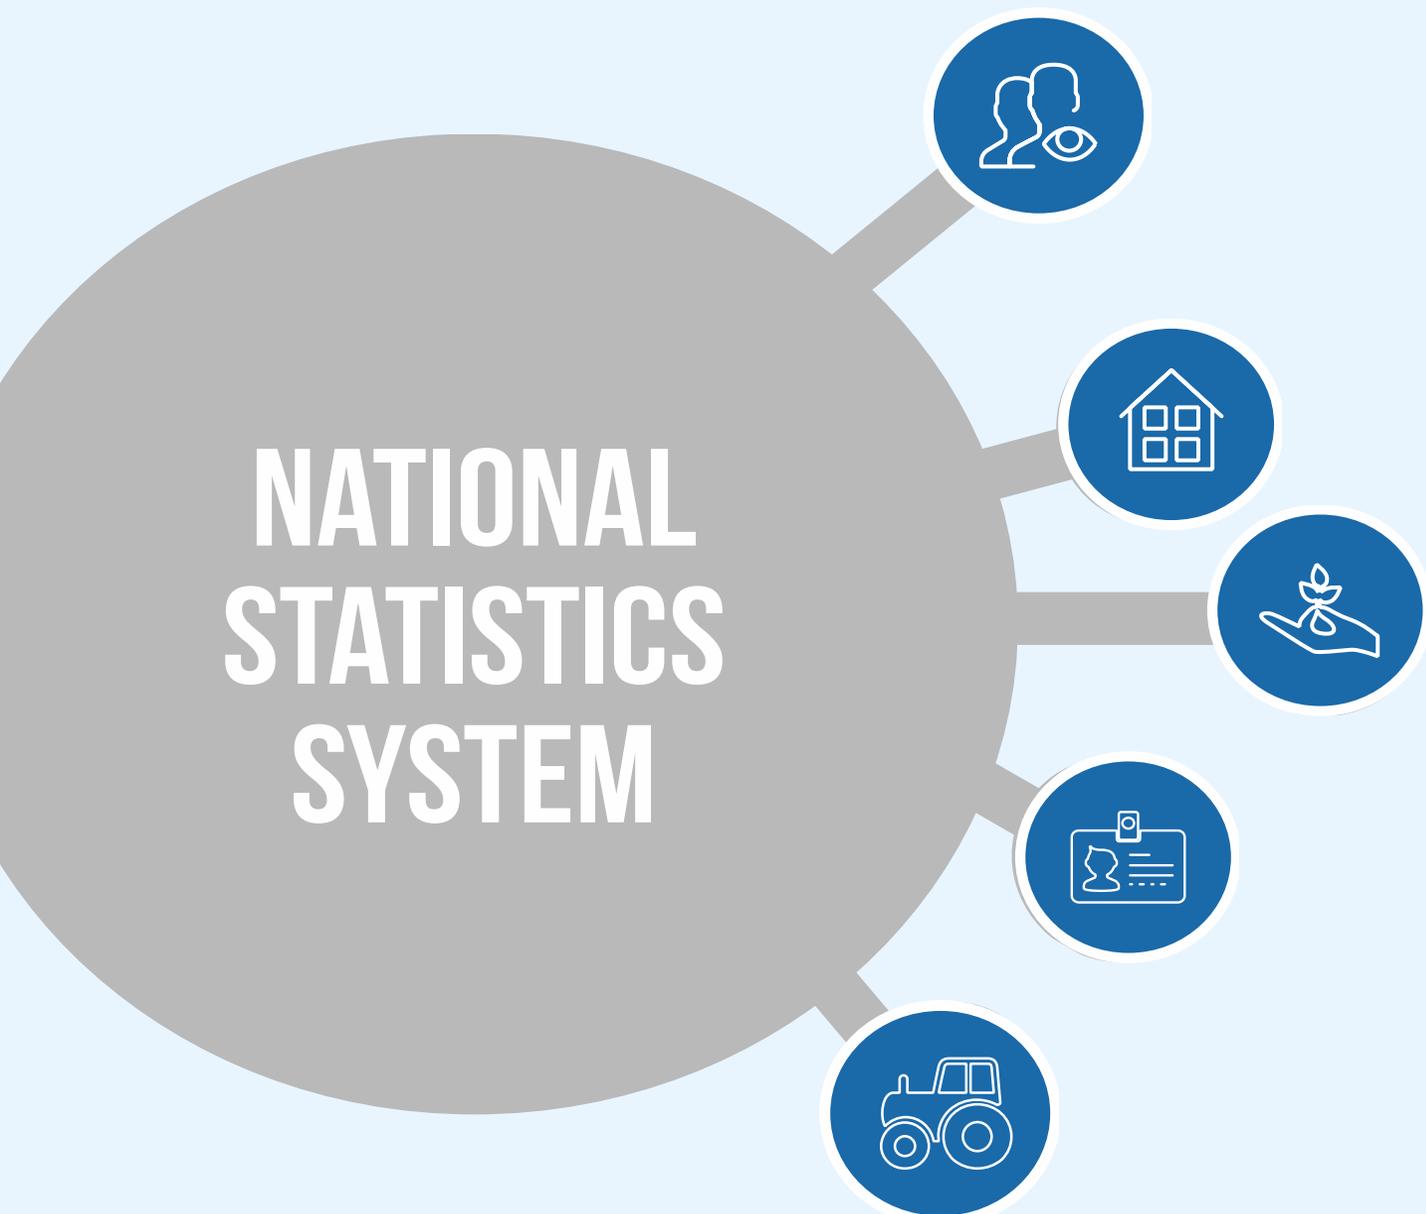

Data Categories from the Open Data Barometer		
Mapping data	Company registration	Primary and secondary education performance ✓
Land ownership	Legislation	Crime statistics ✓
National statistics ✓	Public transport timetables	National environmental statistics ✓
Detailed budget data	International trade ✓	National Elections Results
Government spending	Health sector performance ✓	Public contracting

Top-level government-wide support for open data can be a powerful incentive for open national statistics, and may bring greater resources to the effort. But it may also cause traditional fields of statistics to be overlooked in the excitement to release data that get larger headlines.

At the 2016 International Open Data Conference, the NSO and Open Data Communities had a chance to share ideas

Open Data Challenges for NSOs & Their Partners

NATIONAL STATISTICS SYSTEM

- Legal & Political
- Coordination & Planning
- Technical: Standards & Facilities
- Capacity: Human & Financial
- User Needs & Feedback

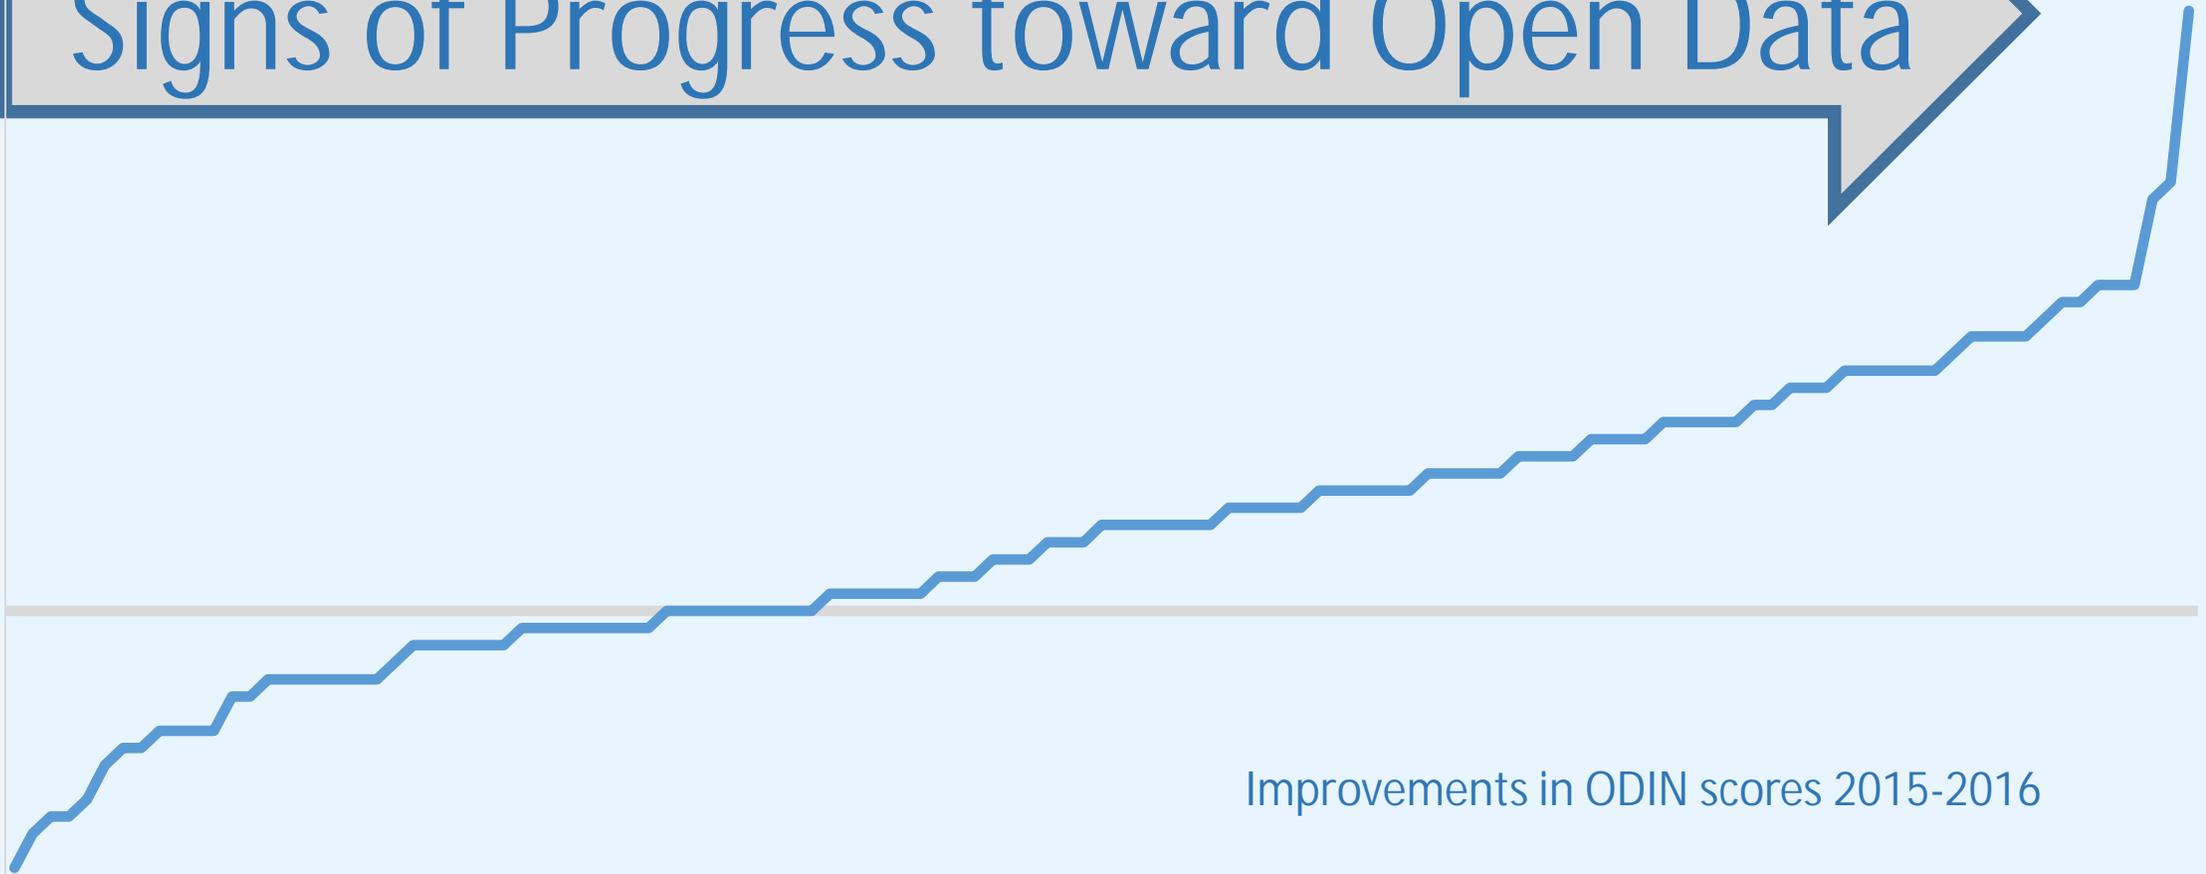

Opportunities & Tools

- ODRA – Open Data Readiness Assessment (World Bank)
Action-oriented assessment of government's readiness for an open data initiative
- ADAPT – Advanced Data Planning Tool (PARIS21)
Web-based planning tool to bring stakeholders together
- ODIN – Open Data Inventory (Open Data Watch)
Objective assessment of the coverage and openness of NSOs data offerings
- Global Partnership for Sustainable Development Data
 - Data4SDGs Toolbox – tools, methods, and resources to address institutional, policy technical, and capacity issues
 - Data Roadmaps -- A tool for countries to engage stakeholders in a plan for monitoring the SDGs
 - Digital Marketplace – Make connections and find solutions to data challenges

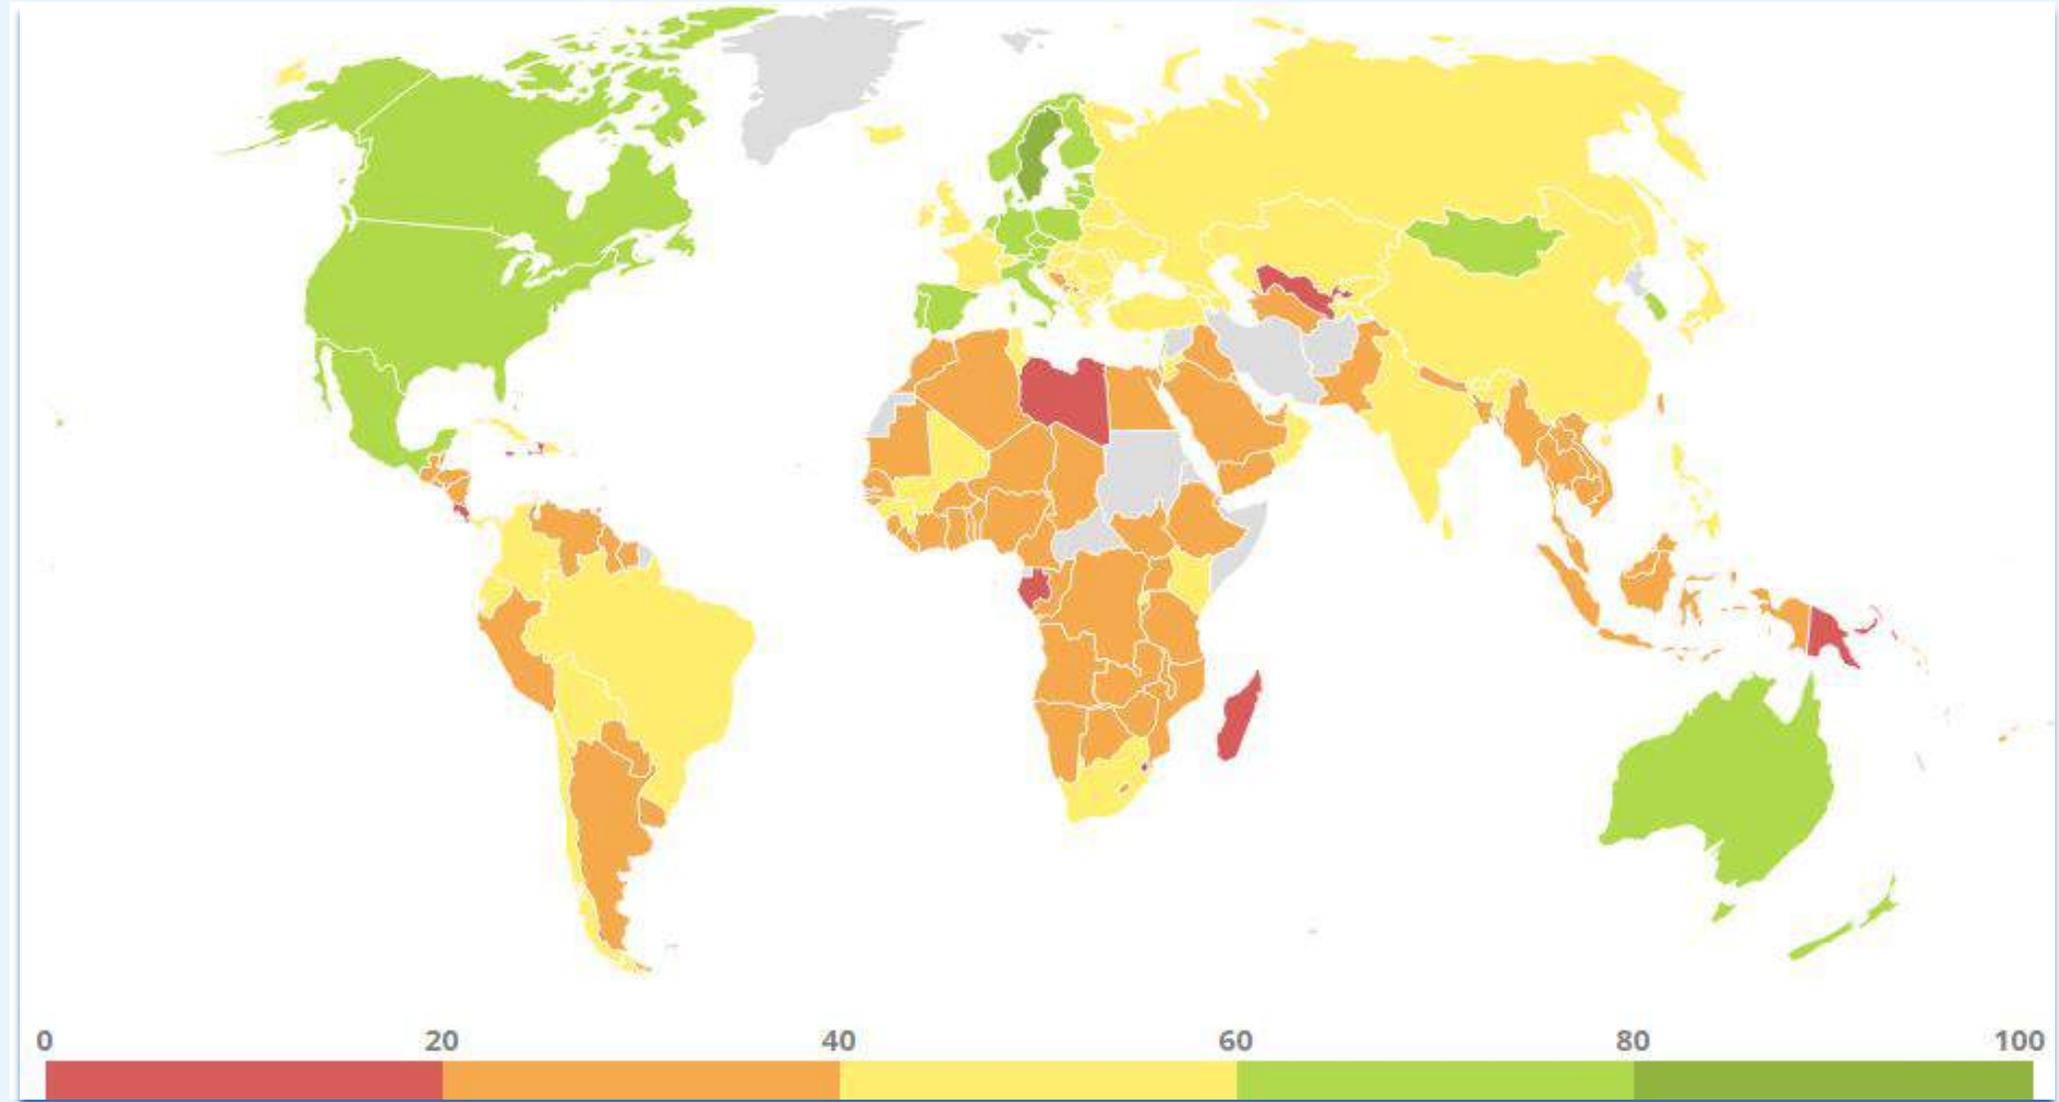

The Open Data Inventory assesses the coverage and openness of national statistics in 20 data categories.

Signs of Progress toward Open Data

Improvements in ODIN scores 2015-2016

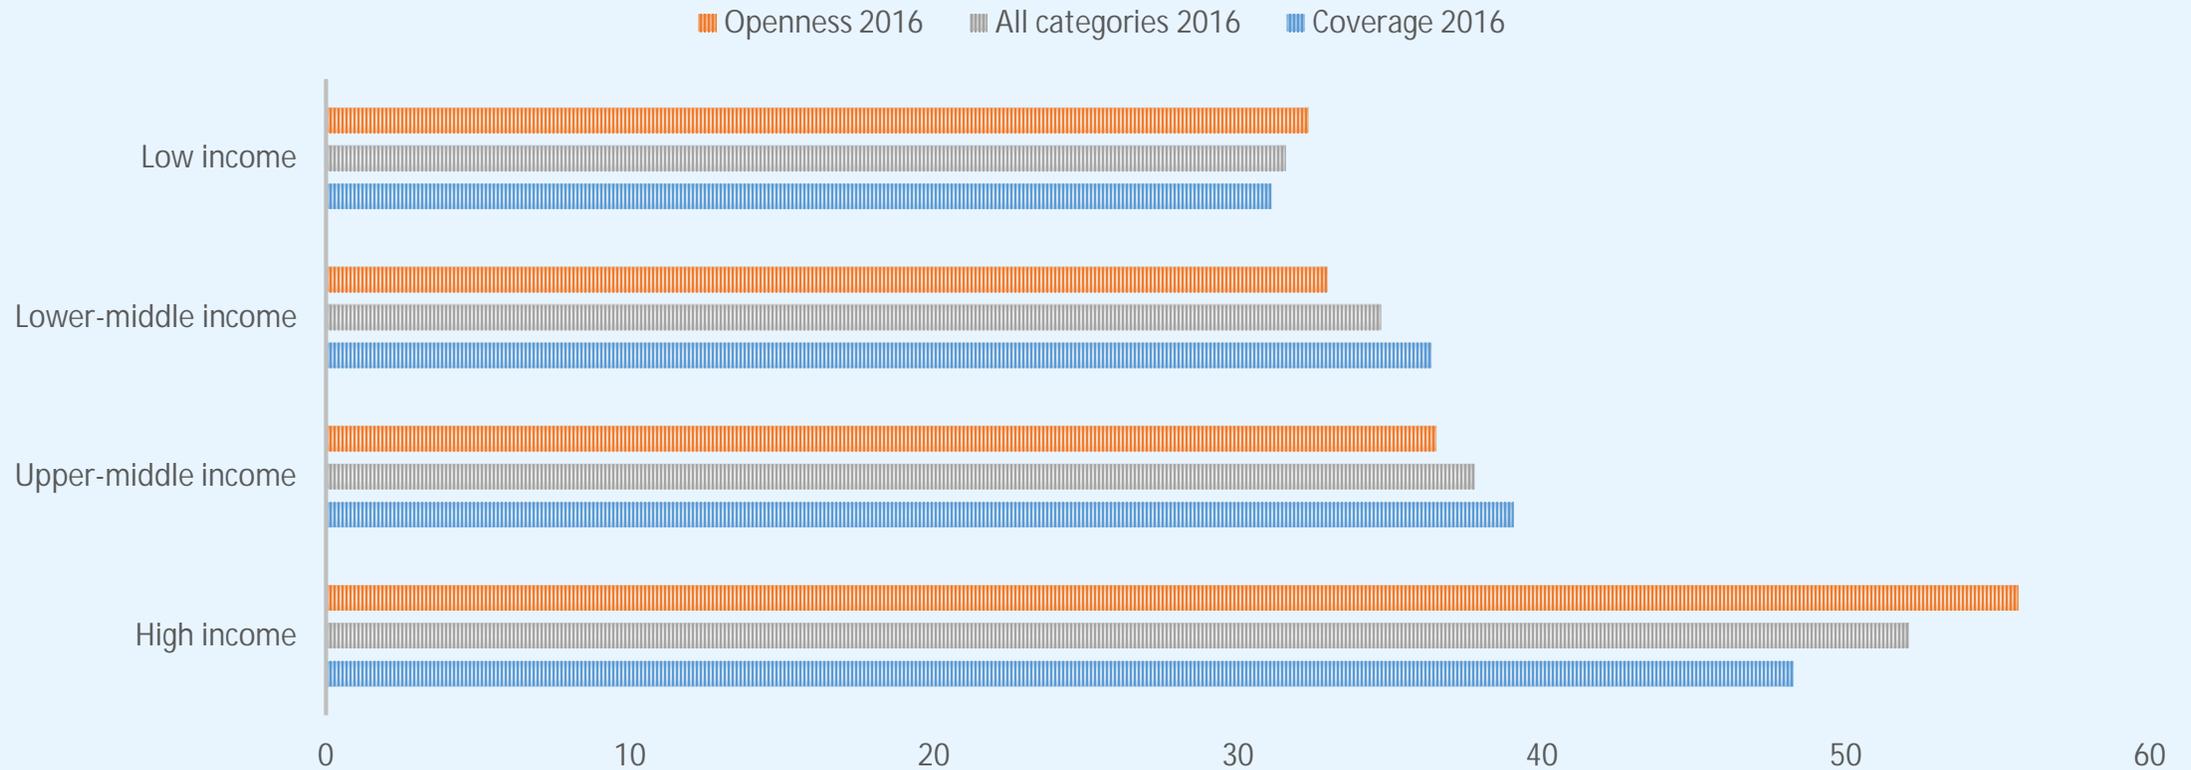

48 more countries included in 2016

Richer countries had higher average scores

But differences among middle- and low-income countries were small

SCORES BY INCOME GROUP

Some countries have taken the first steps

Sierra Leone

<http://www.statistics.sl>

Malaysia

<https://www.statistics.gov.my>

Subscores	Coverage		Openness		All Elements	
	2015	2016	2015	2016	2015	2016
Social Statistics	39	46	15	30	27	38
Economic Statistics	65	57	16	39	37	47
Environment Statistics	12	14	10	12	11	13
All Categories	36	38	14	27	25	32

Subscores	Coverage		Openness		All Elements	
	2015	2016	2015	2016	2015	2016
Social Statistics	11	21	6	33	9	27
Economic Statistics	61	43	23	46	40	44
Environment Statistics	18	40	14	38	16	39
All Categories	28	34	14	39	21	36

Sierra Leone converted many published datasets into open formats and improved its coverage of social statistics.

Malaysia launched a new data portal with many datasets available in open formats.

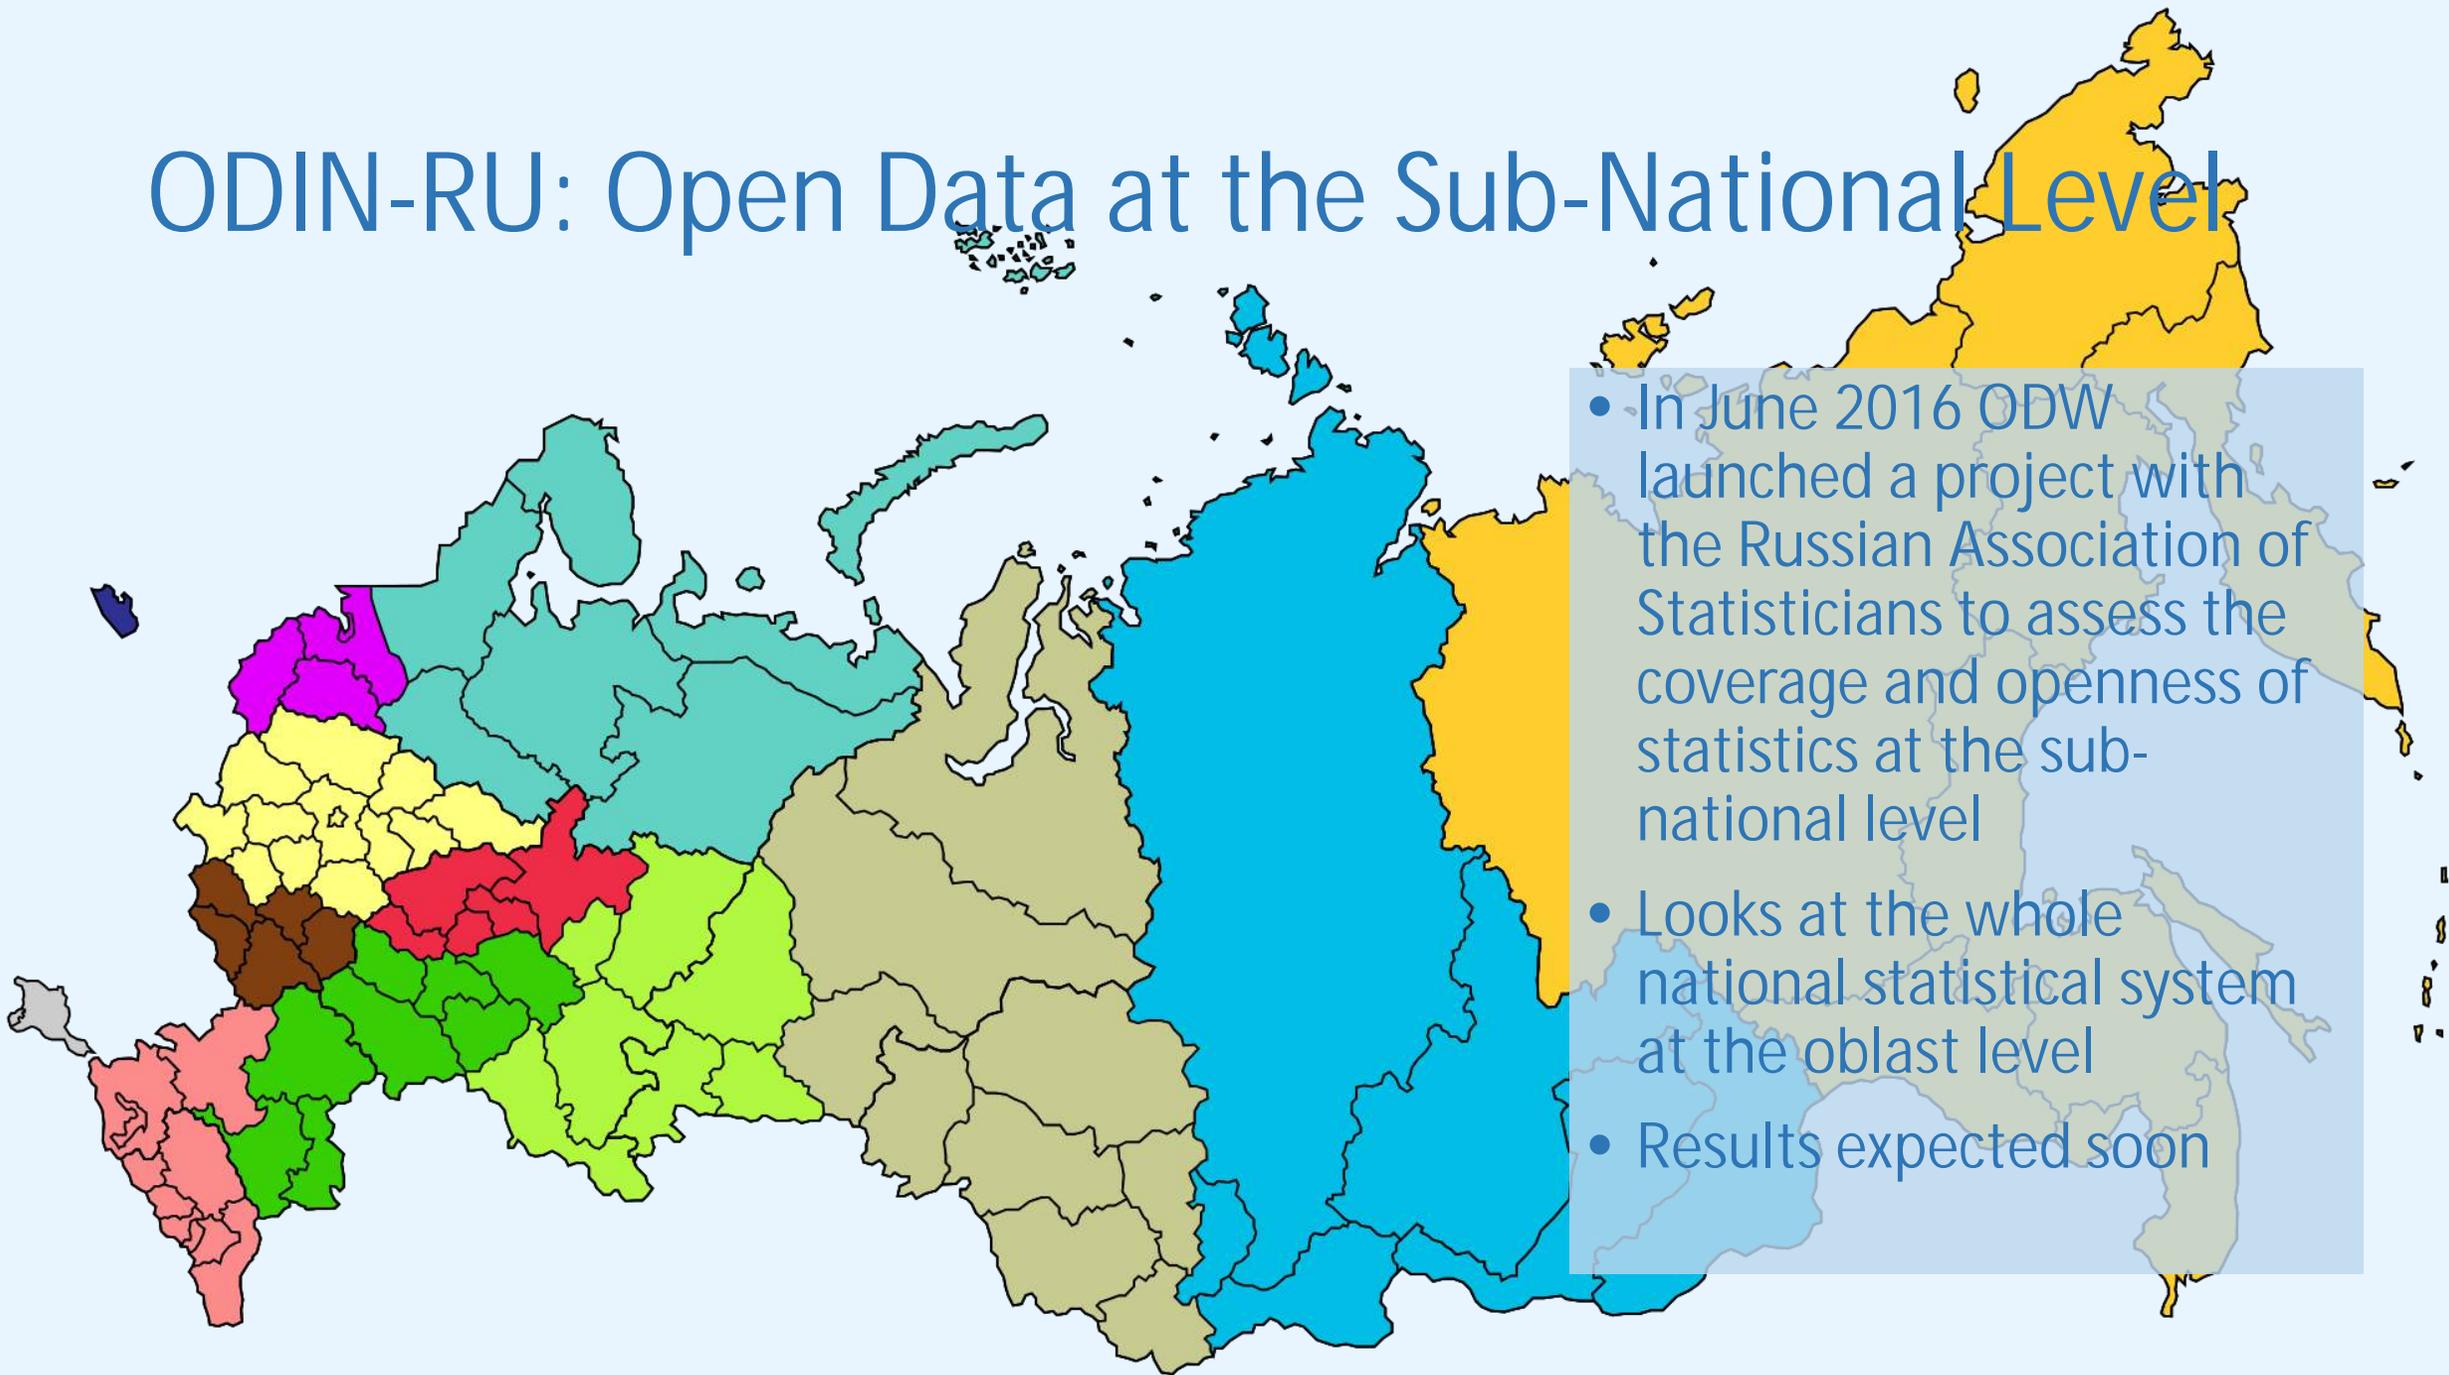

Data Categories	Coverage		Openness		All Elements		Legend Color Score
	2015	2016	2015	2016	2015	2016	
Population & Vital Statistics	90	40	20	60	55	50	
Education Facilities	0	50	0	60	0	55	
Education Outcomes	0	50	0	70	0	60	
Health Facilities	80	80	40	70	60	75	
Health Outcomes	0	40	0	60	0	50	
Reproductive Health	40	40	20	50	30	45	
Gender Statistics	30	30	30	60	30	45	
Poverty & Income Statistics	70	40	20	80	45	60	
Social Statistics subscore	39	46	16	64	28	55	
National Accounts	0	75	0	40	0	56	
Labor Statistics	40	60	30	80	35	70	
Price Indexes	50	70	30	80	40	75	
Government Finance	0	88	0	40	0	61	
Money & Banking	0	83	0	40	0	56	
International Trade	0	100	0	30	0	56	
Balance of Payments	0	100	0	30	0	56	
Economic Statistics subscore	17	80	9	49	12	62

Resource Use	30	40	30	90	30	65	
Energy Use	30	0	30	0	30	0	
Pollution	0	60	0	80	0	70	
Built Environment	40	40	40	90	40	65	
Environment subscore	32	36	28	66	30	51	

Ecuador made a big leap

Ecuador has linked data from various agencies, made many datasets available in open formats, and adopted an open license (CC-BY 4.0).

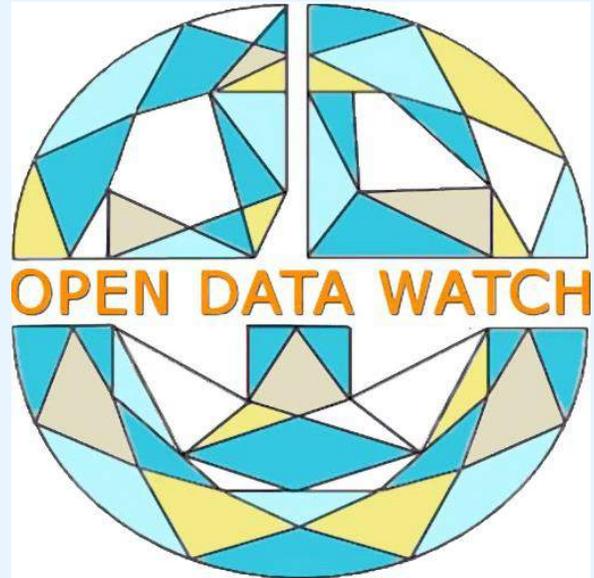

ODIN-RU: Open Data at the Sub-National Level

- In June 2016 ODW launched a project with the Russian Association of Statisticians to assess the coverage and openness of statistics at the sub-national level
- Looks at the whole national statistical system at the oblast level
- Results expected soon

What have we learned

- Given political support and legal authority, many NSOs can make their data open by publishing open terms of use and making their data available in non-proprietary, machine-readable formats
- For many countries, the greater challenge is to increase their capacity to produce the full range of data expected of them
- The SDGs have increased the scope and scale of this challenge
- National statistical systems can and should be in the vanguard of the open data movement: that will require innovative methods, human and financial resources, and strong leadership.
